Education

2018 – 2022
Dublin City University BSc in Computer Applications and Software Engineering

Work Experience

05/20 – 08/20
Fake Company Software Development Intern
Fake Company is a company specializing in 'Nothing' and helping clients.. I worked as an intern in the "Coding" department where I was tasked with creating a POC project for the company. I worked alongside another intern as part of a small team and we were able to complete the POC during my time at the company. I gathered a lot of new skills from this position, notably Java Spring, React, Perforce, Jira and a wide array of general learnings about the operation of large multinational companies.
04/21 – 08/21
Second Fake Company Development Intern
I worked as an intern in the company as part of my college work placement cycle. It gave me hands-on experience with bringing a project into production as well as what it takes to work in a proper software development team and how to effectively communicate with other team members. We used Postgres, Javascript, React, HTML and CSS.
